

Dab E syBox and E syBox Mini pumps require protection from insect infestations to prevent the risk of premature failure.

Failure due to infestation is not grounds for Warranty

The pumps come fitted with insect screens, however these do not offer 100% protection from small insects and ants

White International recommend using residual insect spray inside and out of the pump-shed as per the spray manufacturers recommendations. Placing baits around the pump/s will provide additional protection

E syBox and E syBox Mini are rated at IP44,

This means that effectively, they are designed with very limited protection from the elements (similar to a household appliance) and so need installed in a weather proof enclosure,

Because the E syline Pumps are extremely quite while running (45db), an inside installation is recommended where possible.
